Water Pathways on a Farm

Put arrows on the picture above to show the different places where water is found on a farm.
 What other labels can you add to the picture?
 How might waste water move across the farm?

Add Arrow heads to the lines in the diagram above to show the pathways that water moves over a farm.

Cut out the individual boxes and add your own arrows to show other ways the water may move across the farm.

You may photocopy materials for classroom use
